

Ambitious About Autism
Risk Assessment – Coronavirus (COVID-19)
Risk Assessment – The Rise School Sixth Form

Definitions

“AaA” means Ambitious About Autism and Ambitious About Autism Schools Trust.

Clarifications

The purpose of this Risk Assessment is to outline risks associated with the COVID-19 pandemic, as well as the actions AaA is taking to manage these risks, specifically for **The Rise School**. This particular risk assessment is to cover a specific AaA setting and is intended to cover any person entering that setting, regardless of whether they are a pupil, parent or guardian, member of staff, volunteer, partner, visitor or contractor.

Separate, more specific risk assessments have been drawn up for specific groups of staff, as well as pupils and learners. This risk assessment is different in the sense that it is intended to cover the access to and generally understood activities within a particular setting or location.

AaA recognizes that some staff are classified as per the government guidance as being particularly vulnerable. Where appropriate and in accordance with government guidance, separate, individual risk assessment and subsequent adjustments will be made for these staff.

THIS RISK ASSESMENT MUST BE READ IN CONJUNCTION WITH THE GENERIC “SCHOOL AND COLLEGE STAFF” RISK ASSESSMENT
(*Please see footnote on final page of this document)

THIS RISK ASSESSMENT IS REVIEWED MONTHLY AND WILL CAPTURE ANY ADDITIONAL CONTROL MEASURES DEEMED NECESSARY AS THEY ARISE.

Title:	Coronavirus (2019-NCoV) Risk Assessment	Page:	Page 1 of 9
Issue Date:	20 May 2020	Review Date:	04/03/2022

1.0 Background

A coronavirus is a type of virus. As a group, coronaviruses are common across the world. Typical symptoms include fever and a cough that may progress to a severe pneumonia causing shortness of breath and breathing difficulties.

Generally, coronavirus can cause more severe symptoms in people with weakened immune systems, older people, and those with long-term conditions like diabetes, cancer, and chronic lung disease.

Viruses constantly change through mutation, and so the emergence of new variants is an expected occurrence and not in itself a cause for concern; SARS-CoV-2 is no exception. A diversification of SARS-CoV-2 due to evolution and adaptation processes has been observed globally.

While most emerging mutations will not have a significant impact on the spread of the virus, some mutations or combinations of mutations may provide the virus with a selective advantage, such as increased transmissibility or the ability to evade the host immune response. In such cases, these variants could increase the risk to human health and are considered to be variants of concern. AaA will continue to monitor and react to all new variants of the coronavirus and implement specific controls measures where necessary.

Routine lateral flow testing is carried out at home by any staff working in our settings and continues as per government guidelines.

On 26 November 2021, WHO designated the variant B.1.1.529 (Omicron) a variant of concern on the advice of WHO's Technical Advisory Group. This decision was based on the evidence presented to the TAG-VE that Omicron has several mutations that may have an impact on how it behaves, for example, on how easily it spreads or the severity of illness it causes.

EU's public health agency warned that Omicron could cause more than half of all new COVID-19 infections in Europe within the next few months, evidence was emerging, however, that vaccines still appear to offer protection against serious illness.

From Monday 17 January 2022, people with COVID-19 in England can end their self-isolation after 5 full days, as long as they test negative on day 5 and day 6.

It is crucial that people isolating with COVID-19 wait until they have received 2 negative rapid lateral flow tests on 2 consecutive days to reduce the chance of still being infectious.

The first test must be taken no earlier than day 5 of the self-isolation period, and the second must be taken the following day. If an individual is positive on day 5, then a negative test is required on day 6 and day 7 to release from isolation.

It is essential that 2 negative rapid lateral flow tests are taken on consecutive days and reported before individuals return to their job or education, if leaving self-isolation earlier than the full 10-day period.

Issue Date:	20 May 2020	Review Date:	04/03/2022

All eligible staff and students aged 12 and over are strongly encouraged to take up the offer of the vaccine, including boosters, if they have not already done so. Vaccines are the best way we can protect our pupils/learners and each other against COVID-19. They help protect young people and adults, and benefit those around them.

Face coverings must now be worn again in communal areas in all settings by staff, visitors and pupils/learners aged 11 and above, unless they are exempt.
